

Exploratory 3-pattern subspace (Haflaga, Week-Dilug, Dilug-in-Dilug): null clouds vs observed vector
Dilug encodes point size; Week encodes point shade. Primary inference uses all five patterns (Section 4).

Global permutation (H_G) null $D_M = 4.50, p < .001$

Multinomial (H_{iid}) null $D_M = 4.39, p < .001$

Within-woman (H_W) null $D_M = 2.68, p = 0.067$
