

Participant Flow and Analysis Design

Source dataset: Fehring (2012), Marquette University archive
Collected in the NFP trial of Fehring et al. (2013), USA

Trial eligibility (NCT00843336): women aged 18–42,
self-reported cycle lengths 21–42 days

- Trial exclusions:
- Recent hormonal contraception
 - Breastfeeding, pregnancy
 - Known fertility problems, smoking

NFP users included in source
(self-selected, cycle-aware women)

Archived file: 159 women, 1,665 cycles
(all cycle lengths 18–54 days, none missing)

- Excluded:
- 3 women with duplicated records (16 cycles)
 - 38 women with < 5 cycles (87 cycles)
 - 8 duplicated rows of 1 woman

Analysed: N = 118 women
1,554 cycles (mean 13.2, SD 6.1, range 5–45)

Pattern detection applied
(5 cycle-length-based vessel types)

H_G
Global permutation
(B = 50,000)

H_{iid}
Multinomial null
(B = 50,000)

H_W
Within-woman perm.
(B = 50,000)
